

Electricity	A type of energy that can be converted into different energy eg. light, sound, movement.
Circuit	A collection of components that make an electrical system.
Circuit component	One of several parts that complete a circuit (e.g. switch).
Configuration	How different parts are put together to form an object.
Series circuit	One path for electricity to flow.
Problem solve	Develop and test solutions to an issue.

How does a motor make the doodler move?
 What do we need to make a circuit work?
 How does electricity flow through a circuit?
 What happens when we use a switch in a circuit?
